

IRRIGATION TUBE EVAFLOW™

We have various types of irrigation tube including micro sprinklers, drip irrigation, many of which permeate set underneath the mulch film.

- Holes in tubes are narrow allowing for gentle and even watering
- Due to the gentle watering system, the soil remains soft and porous.
- Thanks to our special filter inside tube, watering remains even throughout the field.
- Because of this special filter, tubes are not easily clogged.

Applications

KIRICO™

Watering tubes are necessary for cultivating on dry lands and in greenhouses.

- We can provide various types of tubes in accordance with each application, purpose and cultivation area (types of crops, growth stages, greenhouses or open field, and etc.)
- Due to the gentle watering system, the soil remains soft and porous.

General precautions;

- Agricultural purpose only.
- Please use them with the proper working pressure. Tubes might break if the pressure is too high.
- Open the valve of water supply gradually to avoid a sudden pressure increase. If this is not done, the tube may burst.
- Please note that dragging, bending or clogging of the tube may cause damage to the tube.
- Please use clear water to avoid clogging. We recommend installing filter equipment before inserting the tube.
